## How to connect to your home WiFi

Navigate to your wireless network settings.

A list of wireless networks should now be displayed.

Open Network	and Sharing Center	

If you need to check your network settings, you can do this by going to the Network and Sharing Center by right clicking your wireless settings and selecting **Open Network and Sharing Center**.

02/02/2016

Once connected, you will need to disable your proxy for internet access. Select **Internet Explorer**.

You may be displayed with **This page can't be displayed** when Internet Explorer is open. This is due to your Proxy being on.

Select **Tools** (the cog in the top right corner) then **Internet options** (second from the bottom).

Select Connections (5<sup>th</sup> tab across) and then LAN settings.

Local Area Network (LAN) settings LAN Settings do not apply to dial-up connections. Choose Settings above for dial-up settings.
OK Cancel Apply

Under Proxy server, you will see **Use a proxy server for your LAN** which will be ticked. Please untick this box (which will grey out the **Bypass proxy server for local addresses** box).

Automatic configuration Automatic configuration may override manual settings. To ensure the use of manual settings, disable automatic configuration.
Automatically detect settings
Use automatic configuration script

✓ Bypass proxy server for local addresses
OK Cancel

Select **OK** and restart Internet Explorer for the changes to be made.

You should now have internet access.
